

# HIGH SHINE

## *Ultra High Speed Restorer*

This product is designed as a floor finish restorer. It works equally well in a mop-on or spray-buff application. Designed primarily for use with high speed and ultra high speed equipment – this product features a cleaning agent that removes marks and surface soils while it restores, repairs and renews the floor finish. The faster evaporation rate of this product makes it ideal to use with high speed buffing and burnishing. The machine operator does not need to slow down their pace or rework an area because of clouding caused by products that buff out more slowly. This product can be diluted with water for additional economy or for use with standard floor machines. When this product is diluted the surface evaporation rate will slow to allow the slower speed machines adequate time for polishing. When buffing or burnishing is not immediately possible, this product can be diluted with cold water at the rate of 1 to 1, 1 to 2 or 1 to 3 and used as a mop-on restorer. When used in this manner, it will remove the surface soil, repair and restore the floor's luster. To achieve an even higher gloss simply buff the dried film out when time permits.

### SPECIFICATIONS

Color .....	Light Yellow
Clarity .....	Emulsion
Flash Point .....	Non-Flammable
Wt.per Gallon .....	8.34 lb./gal.
pH .....	8.5 ± 0.3
