

Penetrating Sealer

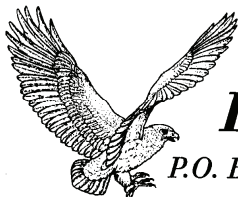

This product is for use in sealing, protecting and beautifying hardwood floors. The polyurethane base of this product performs exceptionally well on maple, oak, pine, beech, pressed wood pulp, and parquet. The exceptional seeping qualities of this product will enable it to penetrate the surface of the wood so that when dried it will actually harden the wood and protect it from soil penetration. It may be used as a sole coat or as an under coat, and also as a primer for heavier finishes of polyurethane. When used as a high gloss coating for wood 2 or 3 coats may be needed in order to completely fill the wood surface and create the ultra high gloss.

This penetrating sealer is best applied with a flat wool applicator or short nap paint roller. Coverage is normally 500 to 700 square feet per gallon of sealer. Dry time will vary but can be from 1 to 3 hours under normal conditions with adequate ventilation.

SPECIFICATIONS

Color	Light Amber / Clear
% Solids	20-22%
Fragrance	Aliphatic Hydrocarbon
Base	Modified Alkyd Resin
Flash Point	Less than 100°F
Specific Gravity	0.9999 @ 80°F
