

# *Spray Shine*

This product incorporates cleaning agents and polymers for two jobs in one. It removes soils and from highly polished floors, while it repairs and restores the shine. It can be used on all resilient floors and is compatible with all waxes and finishes. It can be used in a bucket with a mop to clean and shine while mopping. The resulting shine will give the appearance of buffing without the buffer. If a quick buffing with a white or red pad is desired, it responds well to that process. If used as a spray buff compound, it will clean, polish and renew the surface during your normal buffing process. Dilution of this product will vary. If used in a mop bucket, a mixture of 1 part cleaner to 1, 2, or 3 parts water will work. The heavier dilution you use the less cleaning and repairing you will accomplish. For normal floor care, a mixture of 1 to 3 will provide excellent results. When used in a sprayer for spray buffing, use straight or mix half and half with cool water. Spray in front of machine and polish to a shine. For best results, the buffing process should be done with a red pad, being sure the pad is turned to prevent build-up in the pad of dirt, soil and dead surface finish. Wash pads out with a good detergent after use to prolong the life of your pad and to prevent resoiling the floor.

## Specifications

|                   |                |
|-------------------|----------------|
| Color .....       | Pink/Opacified |
| Fragrance .....   | Pleasant       |
| Foam .....        | None           |
| pH .....          | 8.6 ± 0.5      |
| Solids .....      | 6.5 ± 0.5      |
| Wt. per gal. .... | 8.4 lbs/gal    |
